## Expression Syntax (example)

CS 4300 - Spring 2017

| sentence | $::=$ expression |
| :--- | :--- |
| expression | $::=$ term |
|  | $::=$ ADDOP term |
| term | $::=$ factor |
|  | $::=$ term MULOP factor |
| factor | $::=$ variable |
|  | $::=$ literal |
|  | $:=$ expression $)$ |
|  | $::=$ ID |
| variable | $::=$ INT_LITERAL |
| literal | $::=$ FLT_LITERAL |

Where:
Entries in boldface are tokens
MULOP is one of * / \%
ADDOP is one of +-
FLT_LITERAL is a float constant without a sign
(at least 1 digit before and after decimal pt.; possible exponent)
INT_LITERAL is an integer constant without a sign
ID follows the usual rules for C identifiers, and may be any length
( ) are single-character tokens representing themselves
